**General Objective:** To characterize the engine and the nutritional status of children of 0-3 years from the center of Valledupar nutritional recovery performance.

**Methodology:** A descriptive cross-sectional observational study in children 0-3 years of age hospitalized in nutritional recovery center Hospital Rosario Lopez Pumarejo of Valledupar between August and November 2015 were evaluated through the AIMS and abbreviated scale development. Results: Data from the study are 22 children hospitalized in nutritional recovery center hospital Rosario Lopez Pumarejo, from 1 August to 20 November 2015

**Discussion:** research association was found between the variables age and percentiles ( $p \leq 0.5$ ), age and total EAD ( $p \leq 0.6$ ), and diagnosis and coarse and fine an association of ( $p \leq 0.5$ ) motor, so, as in the case of children evaluated with the Alberta Motor scale percentiles show that 63.6% of children with delayed development motor development, this considering the severe global malnutrition was the cross diagnosis for all ethnicities evaluated.

**Conclusions:** It is essential to consider as a fundamental aspect for government and nongovernmental organizations, timely intervention factors that affect child malnutrition, through different programs that may decrease the effects of this, considering the vulnerability of ethnic groups The Caribbean Region.

### Biography:

My name is Gina Maureth Bustos León, born on April 4, 1987 in the city of Valledupar, Cesar, Colombia. My undergraduate training is a physiotherapist, I have a master's degree in creation, direction and project management, and a master's degree in epidemiology. Currently working as a research professor at the University of Santander, Valledupar, and currently I'm an adviser of physiotherapy practices in preterm and low birth weight children.
