

World Congress on

Nutrition and Obesity Prevention Source

November 16-18, 2017, Barcelona, Spain

The mean age of the patients was $50,27 \pm 14,20$ years in study. Mean MIS values of the patients were 6.03 ± 2.43 and protein Intake was 0.69 ± 0.22 g / kg / day. Protein Intake negatively correlated with MIS. As protein Intake increased, MIS value decreased. At the end of this study, it was found that protein Intake correlated with MIS in hemodialysis patients and MIS value was found to be a appropriate method in following nutritional status.

Biography:

I was born in Denizli on March 4, 1992. I graduated from Gazi University Faculty of Health Science Department of Nutrition and Dietetics in 2014. I worked at Mehmet Akif Ersoy University and Istanbul Technical University. I am working as a research assistant at Gazi University and continuing my master thesis as a master student.
